

IFTTT Quick Set Up Guide

Ensure your Pulse hub is setup and working prior to connecting IFTTT.

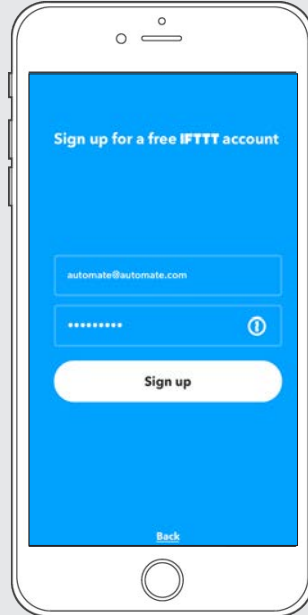

Create Account

STEP 1

Download the IFTTT app on iOS or Android. Sign up for a free account

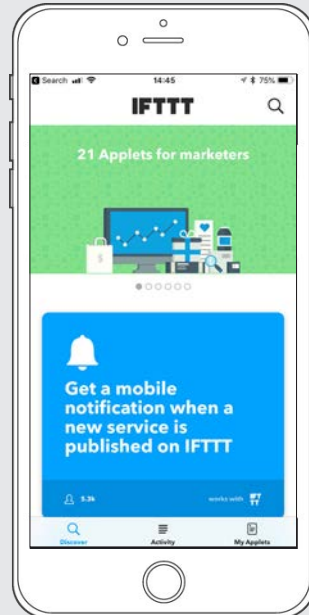

STEP 2

Enter your email and create a secure password

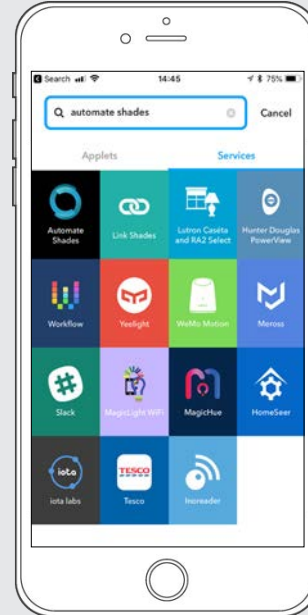

Connect your services to IFTTT

STEP 3

Select discover

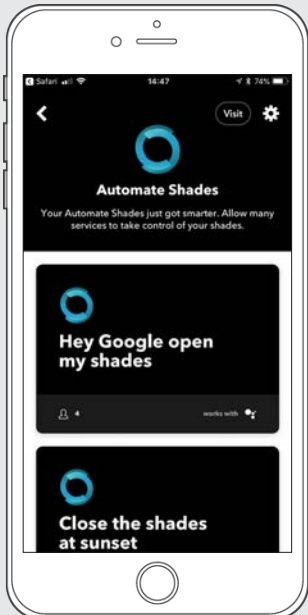

STEP 4

Ensure you on the services tab. Search for "Automate Shades" and select it.

Connect your services to IFTTT

STEP 5

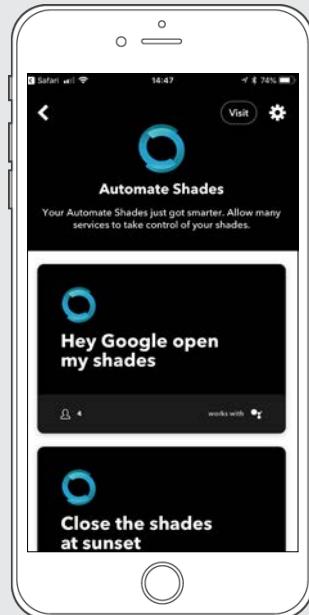

Select Connect in the top right hand corner.

STEP 6

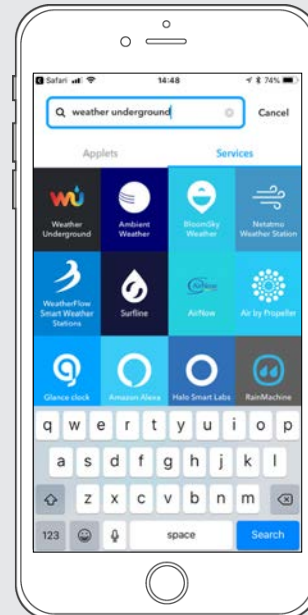

Enter your Automate Pulse app credentials.

STEP 7

Your Automate shades are now connected to IFTTT. Select the back button

STEP 8

Ensure you on the services tab. Search "weather underground"

IFTTT Quick Set Up Guide

Connect your services to IFTTT

STEP 9

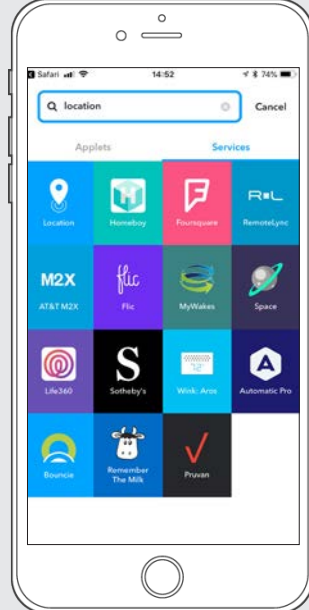

Select Connect in the top right hand corner.

STEP 10

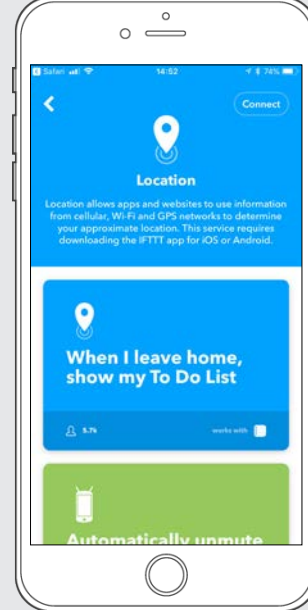

Type and search your local location so weather based triggers are connected to your home location. Select Connect

STEP 11

Ensure you on the services tab. Search "Location" Select Location

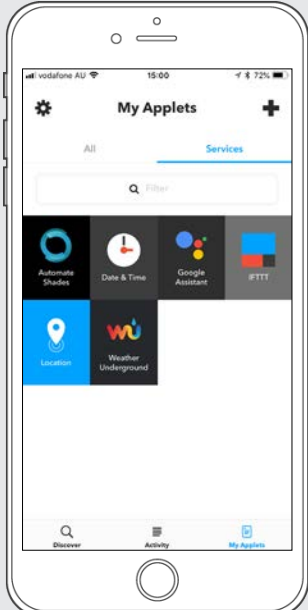

STEP 12

Select connect location

Creating Applets & IF Triggers

STEP 11

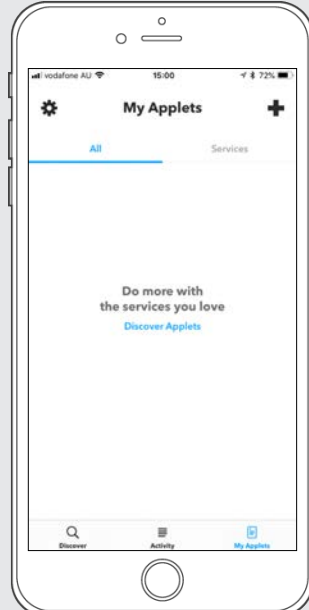

Proceed to connect as many 3rd party services as you need. Select Services tab to see all your services

STEP 12

Applets are just another word for Triggers. IF one thing happens then the other trigger will occur

STEP 13

Select "my applets" Select the + to create a new Applet

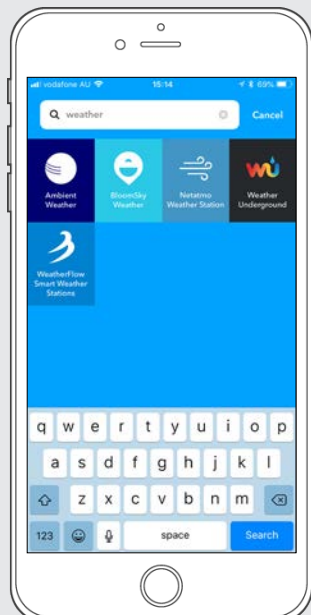

STEP 14

Select the Blue +this to create the first trigger

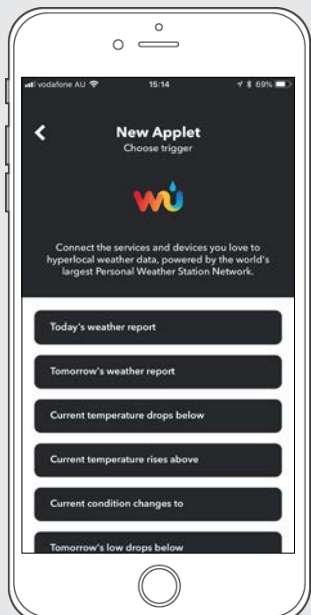

IFTTT Quick Set Up Guide

STEP 15

Search "Weather" Select Weather Underground service

STEP 16

Choose from a range of weather based services

STEP 17

Scroll further down to select "sunrise"

STEP 18

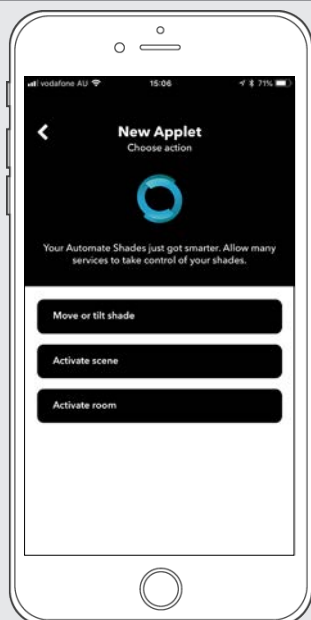

Select the Blue + THAT to create the first trigger

STEP 19

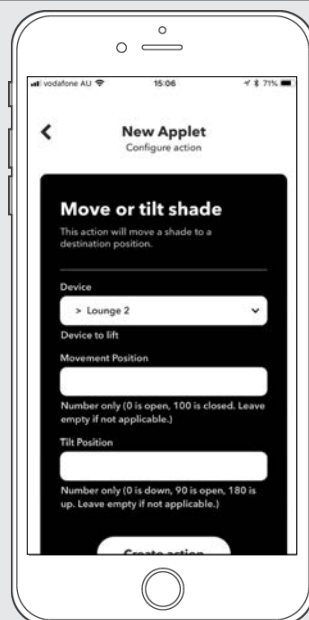

Search and select "automate"

STEP 20

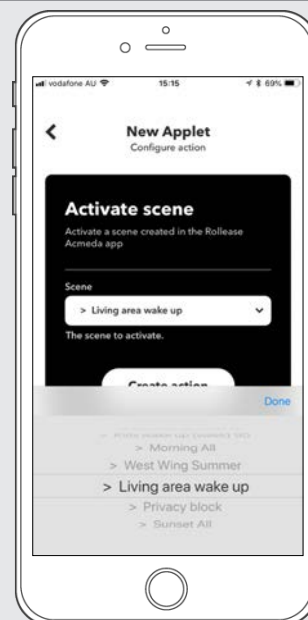

Choose what you want to control from the Pulse app; a single device, scene or a room

STEP 21

Select Scene to control multiple device for sunrise

STEP 22

IFTTT will find all the Scenes in your Pulse app. Select the drop down arrow and find the scene.

IFTTT Quick Set Up Guide

STEP 23

Select a scene already setup in pulse that will raise shades during sunrise. Select Create action

STEP 24

A summary of the trigger will appear. Select finish to finalise the Applet

Repeat these steps and create as many applets you require

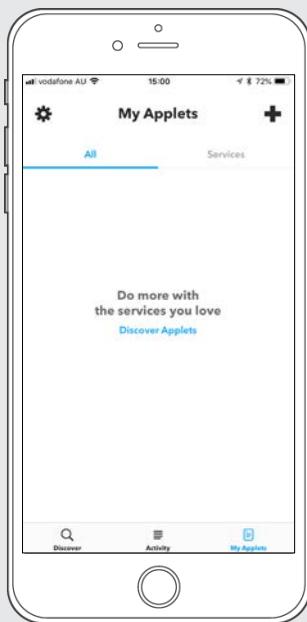

Example of Applet Triggers:

- Close shades at Sunset
- Close shades if above x Degrees
- Open shade if UV index rises above X

IFTTT brings all your IoT devices and apps together, here are some other commands that work with compatible apps and devices:

- If I turn on light; close my shade
- If the temperature rises close my shades
- If there is strong wind warning close my awning
- If there is rain forecast close my awnings

STEP 25

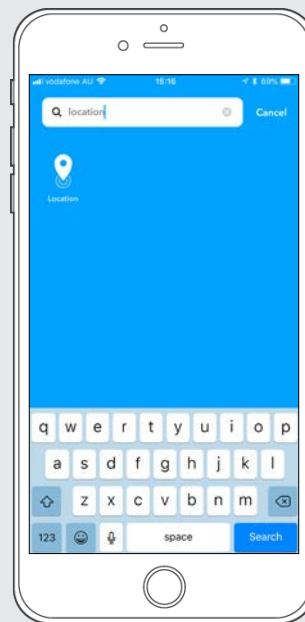

Select "my applets"
Select the + to create a new Applet

STEP 26

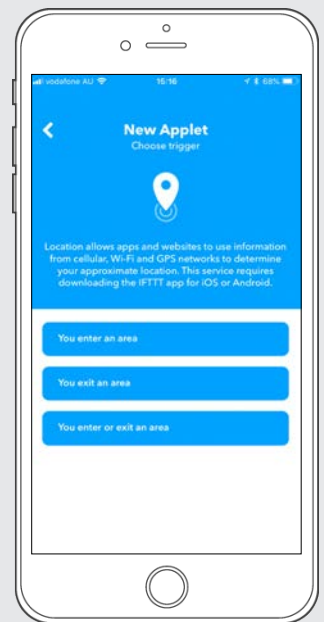

Select the Blue IF + to create the first trigger

STEP 27

Type "location" and select location service

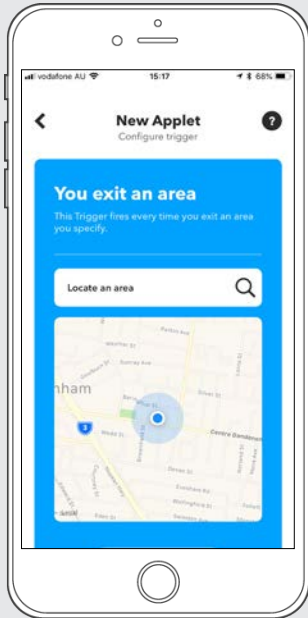

STEP 28

Choose "you exit an area"

IFTTT Quick Set Up Guide

STEP 29

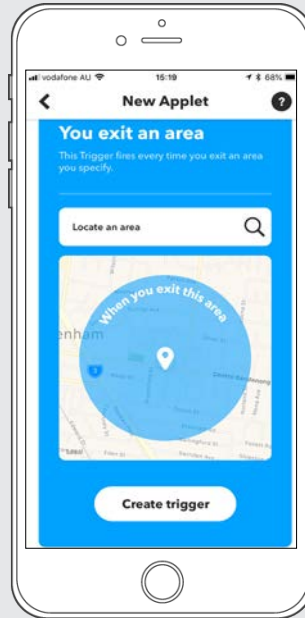

Locate the area you want the trigger to occur when you exit

STEP 30

Select the Map and zoom in or out to select the location

STEP 31

Confirm Trigger

STEP 32

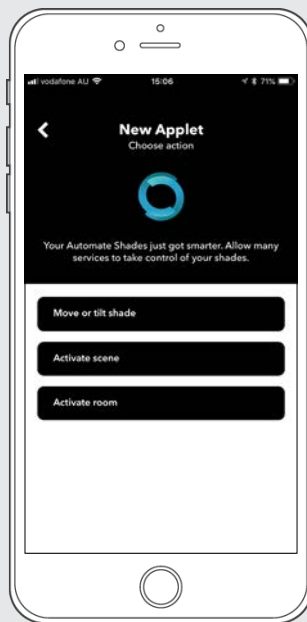

Select the Blue + THAT to create the first trigger

STEP 33

Search and select "automate"

STEP 34

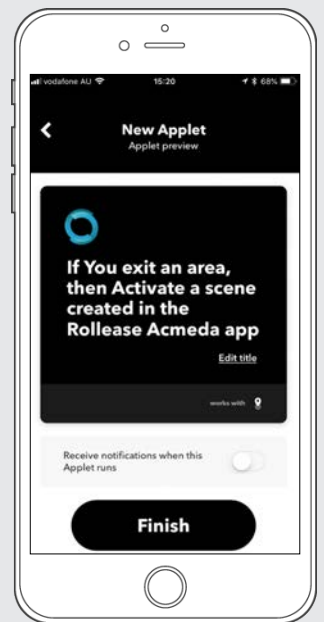

Choose what you want to control from the Pulse app; a single device, scene or a room

STEP 35

Select Scene to control multiple devices to move when you exit set area

STEP 36

A summary of the trigger will appear. Select finish to finalise the Applet
